

What can influence
your skin's ability to
combat signs of aging?

Are you getting enough
Vitamin C to optimise
skin health?

NUTRIGENOMI®
EAT ACCORDING TO YOUR GENES

Personalised Nutrition for Skin Health

The answer may be in your genes

Our test is more than skin deep. As the first line of defense into your body, your skin's health is just as important as the rest of your body. The Nutrigenomix skin test helps determine how genes can influence the skin's ability to combat signs of aging, as well as markers that affect eating habits and how the body metabolises nutrients that support skin health.

Learn how your genes can affect:

Loss of Skin Elasticity

Eating Habits

Nutrient Metabolism

Antioxidant Capacity

Sugar Preference

Facial Pigmented Spots

Advanced Glycation End Products (AGEs)

About Nutrigenomix®

- Comprehensive genetic test for skin health.
- Developed by world-renowned researchers.
- Genetic tests are based on the most robust scientific evidence.
- DNA is analysed using a saliva sample or cheek swab.
- Personalised skin care recommendations developed based on your unique genetic profile.
- Contact your healthcare provider to get started and *eat according to your genes!*
